- Moisture/suction relief holes in back of bucket.
- Estimated bucket weight 3,100 pounds.
- Pins Sold With Bucket as pictured.

The MassX line of buckets were specifically engineered and manufactured to meet our own fleet, and our customer's fleet demands for an above-average, top-end, Factory OEM Grade bucket suitable for heavy use and mining, while still being efficiently priced due to the MassX efficient business model.

Unlike most all imported buckets or lower end domestic buckets built, these MassX buckets have been engineered strictly for high quality and long life using the very best steel grades available in the marketplace, and are contract manufactured at proven world class ISO 9001 certified factories using the most advanced tooling and welding technologies available.

All of our buckets use a wear-resistant Hardox400 or equivalent steel on the cutting edge, side leading edges, side plates, and the wear strips on the bucket bottom. 70,000 to 100,000 PSI High strength Structural grade steel is used in all other areas of the bucket. We spec a higher quality steel than normally found in other buckets the industry; we want these buckets holding up for our customers as well or better than anything on the market.

We have buckets shipping across the country every week, Standard Delivery Prices available at very good rates. We make an efficient and super easy sales process. We invite your call, visit to our facilities, or complete inspection anytime.
